

Exercise 1

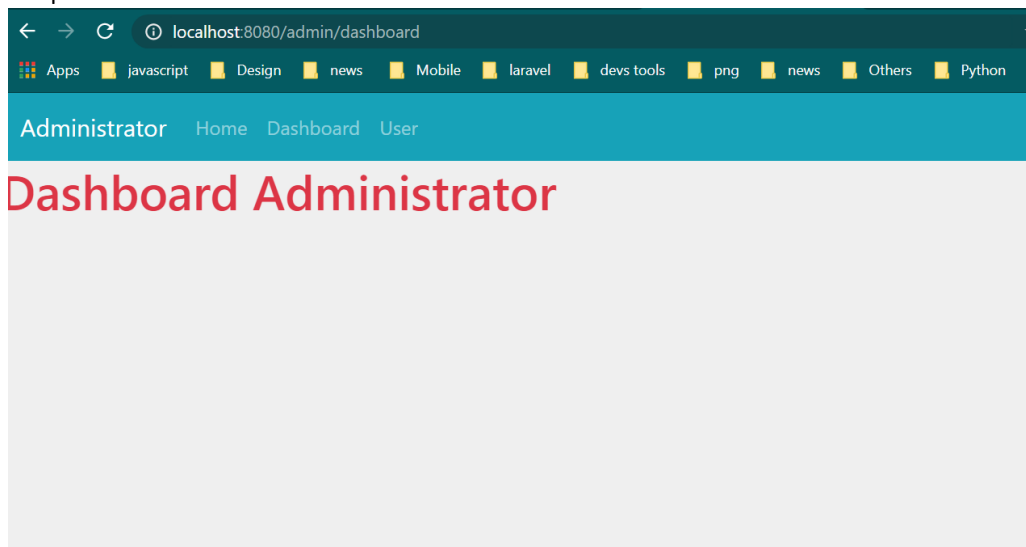

Continue from day two....

1. In views folder create new folder and files:

Folder Name: layouts	
layout.php	<code><?= \$this->renderSection('content') ?></code>
navbar.php	https://www.w3schools.com/bootstrap4/tryit.asp?filename=trybs_navbar_collapse
Moore information about layouts	https://codeigniter.com/user_guide/outgoing/view_layouts.html?highlight=layouts#using-layouts-in-views

You need to display the output on browser like this:

- Example we access to **dashboard**

Menu	User events	Routes
Home	Click	/admin
Dashboard	Click	/admin/dashboard
User	Click	/admin/user
